ALBERDINGK BOLEY in a nutshell

Leading international manufacturer of environmentally friendly water-based binders and oils with unique properties to refine, refurbish, bind and protect multiple types of substrates

Medium sized, privately owned company > 250 million Euro group turnover in 2021

> a partner to our customers for more than 250 years

> 500 employees

Dynamic, Innovative and flexible

Pioneers in biobased polymer dispersions

Dispersions: Acrylic, Vinyl acetate, Polyurethane and hybrid dispersions

Oils: Linseed oil, Castor oil, Derivatives

Locations:

- Krefeld, Germany
- Kerpen, Germany
- Leuna, Germany
- Treviso, Italy
- Congleton, UK
- Greensboro, USA
- Shenzhen, China
- Zhuhai, China

For more information about ALBERDINGK BOLEY and our product offerings, visit www.alberdingk-boley.de.

Introduction

ALBERDINGK BOLEY has more than 250 years tradition of producing linseed and castor oils and their derivatives.

As pioneers for biobased polymers, we already patented the first polyurethane dispersion based on castor oil in the 1990s and launched a whole range of 100% polyols based on castor oil in the early 2000s.

Every industry sector is currently looking for environment-friendly products. Driving forces are the good commercialisation and also economic benefits.

In this brochure we want to focus on the products based on renewable resources instead of pointing out our efforts on saving energy and waste, which is in our opinion self-evident for a company certified according to ISO 50000:2011.

As supplier of binders for paints & coatings, ALBERDINGK BOLEY can contribute in the global CO_2 emission reduction by enhancing the already existing portfolio of renewable resource based products.

page 5 of 20

Which kinds of renewable resources are theoretically possible

ALBERDINGK BOLEY uses polyaddition and radical emulsion polymerization as manufacturing methods for the production of water-based binders.

Therefore renewable resource based precursors need to be reactive in the a.m. processes – this excludes a couple of the a.m. raw materials.

page 7 of 20

Biomass balance vs. dedicated production with renewable resources:

The biomass balance approach offers a convenient way to incorporate renewable materials in the process stream. Biomaterials are used to manufacture Bio-Naphta which is then used in "ordinary" chemical feedstock production.

Latest update April 18, 2024 Alberdingk Boley GmbH | Düsseldorfer Str. 53 | 47829 Krefeld | Germany Phone +49 2151 528-0 | Fax+49 2151 573643 | info@alberdingk-boley.de | www.alberdingk-boley.de

page 8 of 20

The main advantage is that the final product remains unchanged despite the use of renewable resources. However, the final product may not even contain one renewable carbon atom since this is a statistical approach.

The supplier uses an equivalent of renewable raw material per purchased ton of bio mass balance product.

Since it's a statistical method as products made from biomass and crude oil are manufactured in the same plant, a certified process of surveillance with an independent 3^{rd} party needs to be implemented.

Binder-producer <u>and</u> paint-manufacturer will need to be certified accordingly.

Future projects with renewable content

Enhance the ALBERDINGK® portfolio based on dedicated renewables

- ALBERDINGK BOLEY is constantly working on the development of novel castor and linseed oil based dispersions as well as polyols for various applications such as e.g. leather finish, textile coatings, architectural paints, construction, printing and packaging.
- Many polyurethane dispersions can immediately be produced based on polyols which are manufactured from biological sources instead of mineral oil.
- ALBERDINGK BOLEY is currently working intensively to enhance the portfolio of acrylate dispersions based on dedicated, renewable biobased monomers.

Implementation / Certification of the Biomass-Balance concept

ALBERDINGK BOLEY is currently preparing for the implementation / ISCC-certification of the biomass balance concept.

Information on availability of biobased development products

- Please note that many biobased raw material are still short in supply and may have longer lead times, therefore availability of ALBERDINGK® products can vary.
- In case of identical chemical backbone (example U 400 N vs Ren U 400 N) testing can be done with the standard grades and "Ren" samples may only be required for final ¹⁴C analysis / commercial orders
- Examples of biobased development products shall not indicate availability of large sample quantities!

This will improve over time and we will keep our partners updated.

You haven't found the product, you're looking for? Please talk to us!
